Subject

The operating software of the legend console has been up issued to Version 1.61.

Info

L3000 Software Releases Version 1.61

Note

The software version number running on the console is shown on the display during the power up sequence.

This Version 1.61 software is loaded as standard from console 3140.

The software of the Legend console has been up issued to version 1.61. This is to fix a number of software issues:

Software Issues Fixed:

- Automute bug fixed so that any automute manually de-assigned on the input channel will still respond to automute control.
- Ram test has been moved to after reprogramming of the micros. Also the serial port receives a disable during the ram test to prevent incoming characters corrupting the test. The RAM test sends out extra serial comms messages to tell the new LSUTIL package to wait for the results of the RAM test.
- Version Number updated.
- Check mode now lights the UP/DOWN and NOW buttons and the mute check mode has now been corrected so that entering the check mode with Aux mode selected automatically becomes mute check. Solos on input modules react properly to VCA masters being soloed.
- Bug causing input Solo switches on inputs to re-trigger auto mutes now fixed
