HKTS 5/HKTS6 System

Frequency Response
 35Hz – 20kHz (–6dB)

Satellites

Recommended Power

10 – 70 watts

Impedance

8 ohms nominal

Sensitivity

86dB @ 1 watt/1 meter

Tweeter

One 1/2" dome, video-shielded

Midrange

One 3" driver, video-shielded

Dimensions (H x W x D)

4-5/8" x 3-1/8" x 3-3/4"
 (117mm x 79mm x 93mm)

Weight

1.1 lb/0.5kg

Center

Recommended Power

10 – 70 watts

Impedance

8 ohms nominal

Sensitivity

86dB @ 1 watt/1 meter

Tweeter

One 1/2" dome, video-shielded

Midrange

Dual 3" drivers, video-shielded

Dimensions (H x W x D)

3-1/2" x 7-5/8" x 3-3/4"
 (89mm x 194mm x 93mm)

Weight

1.89 lb/0.86kg

Subwoofer SUB-TS5/TS6

Amplifier

100 watts RMS

Woofers

10" woofer, bass-reflex enclosure

Dimensions (H x W x D)

15-3/4" x 15-3/4" x 16-3/4"
 (400mm x 400mm x 425mm)

Weight

33.5 lb/15.2kg

Occasional refinements may be made to existing products without notice but will always meet or exceed original specifications unless otherwise stated

SUB-TS5/TS6 Amplifier

100w Powered Subwoofer Amplifier

LINE VOLTAGE	Yes/No	Hi/Lo Line	Unit	Notes	
US 120vac/60Hz	Yes	108-132	Vrms	Normal Operation	
Parameter	Specification	Unit	QA Test Limits	Conditions	Notes
Amp Section					
Type (Class AB, D, other)	AB	AB	n/a		External Sink required for Class AB
Load Impedance (speaker)	4	Ohms	n/a	Nominal	Z-curve required
Rated Output Power	100	Watts	95	1 input driven	
THD@ Rated Power	0.08	%	0.3	22k filter	
THD @ 1 Watt	0.1	%	0.5	22k filter	
DC Offset	10	mV-DC	20	@ Speaker Outputs	
Damping factor	>100	DF	50		Measured at speaker terminals, Output power 90 Watts THD 0.1 %
Input Sensitivity					
Input Frequency	50	Hz	50	Nominal Freq.	1 input driven
SUB Input	135	mVrms	±2dB	To Rated Power	SUB input driven only
Signal to Noise					
SNR-A-Weighted	100	dBA	90	rel. to rated power	A-Weighting filter

Slope & Q		dB/Octave	n/a		
Limiters (yes/no)	YES	--	n/a		
Features					
LFE Input	YES		functional		BW Limited to 500 Hz
Phase Switch (yes/no)	NO	--	functional		
Volume pot Taper (lin/log)	log	--	functional		
ATO	YES		functional		
Input Configuration					
SUB Line level	LFE		functional		Single RCA Input
Signal Sensing (ATO)					
Auto-Turn-On (yes/no)	YES	--	functional		
ATO Input Frequency	50	Hz	functional		
ATO Level	2	mV	functional	2mV@50Hz into Line Input w/ 1 ch. driven	
ATO Turn-on time	5	ms	functional	Amp connected and AC on, then input signal applied	
Auto Mute/ Turn-OFF Time	15	minutes	functional	T before muting, after signal is removed	Auto turn of time (T) must be 10 > T < 15
Power on Delay time	3	sec.	functional	AC Power Applied	
Transients/Pops					
ATO Transient	5	mV-peak	10	@ Speaker Outputs	
Turn-on Transient	50	mV-peak	100	@ Speaker Outputs	AC Line cycled from OFF to ON
Turn-off Transient	50	mV-peak	100	@ Speaker Outputs	AC Line cycled from ON to OFF
Efficiency					
Stand-by Input Power	13	Watts	15	@ nom. line voltage	Maximum allowable input power under nominal Input voltage and frequency, HOT or COLD operation.
Power Cons.@rated power	185	Watts	195	@ nom. line voltage	100 Watts @ 4 Ohms nominal line voltage
Protection					
Short Circuit Protection	YES	--	functional	Direct short at output	
Thermal Protection	65 deg. C	--	functional	@1/8 max unclipped Power	Temperature rise should not exceed 35K rise
DC Offset Protection	YES	--	functional	DC present at Speaker Out leads	Relay or crowbar (for driver/fire protection)
Line Fuse Rating	2.5	Amps	2.5	Type-T or Slo Blo	External fuse with UL/SEMKO rated holder

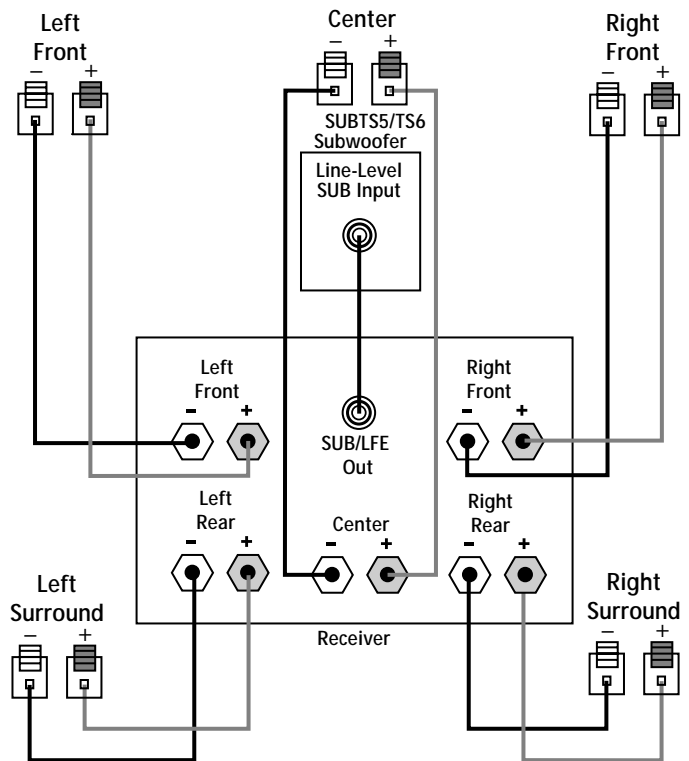

SPEAKER CONNECTIONS

Use the supplied RCA-type patch cord to connect the line-level SUB or LFE output on your receiver or amplifier to the SUB input on the SUB-TS5 or SUB-TS6 subwoofer.

Connect the satellite and center speakers to the corresponding speaker terminals on your receiver or amplifier.

Make sure that you have configured your surround sound processor for "Subwoofer On." The front left, front right, center and rear speakers should all be set to "Small."

When all connections have been made, plug the AC power cord on the subwoofer into an AC outlet.

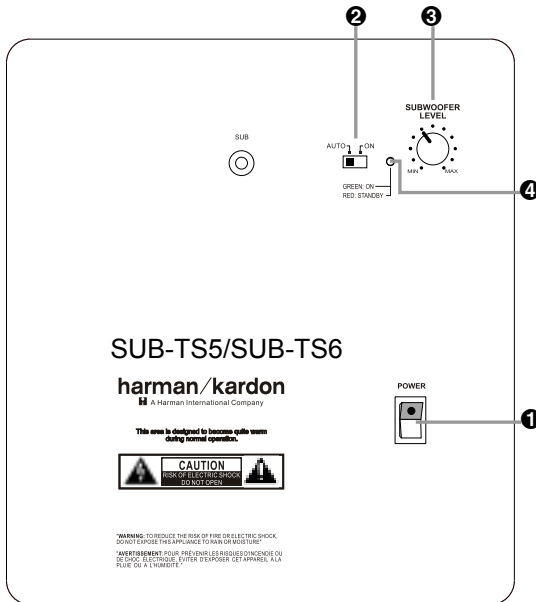

OPERATION

Move the Master Power switch (marked "Power" ❶) to the "•" (On) position. The HKTS 5/6 subwoofer will automatically turn itself on or go into Standby mode, depending on whether or not a signal is being sent to the HKTS 5/6 by your receiver or surround processor, and provided that the Auto/On switch ❷ is moved to the left so that it is in the "Auto" position.

When your receiver or amplifier is off, or is not sending program material to the subwoofer, the subwoofer will be in Standby mode and the LED ❹ on the amp panel will turn red. When the subwoofer senses an audio signal, it will automatically turn itself on and the LED ❹ will turn green. If the subwoofer does not sense a signal after approximately twenty minutes, it will automatically go into Standby mode.

When the Auto/On switch ❷ is switched to the "On" position, the subwoofer will remain on, whether or not program material is playing.

If you will be away from home for an extended period of time, or if the subwoofer will not be used, switch the Master Power switch ❶ to the "Off" position.

Volume

Volume can be adjusted using the Subwoofer Level Control ❸, as shown below.

TROUBLESHOOTING

If there is no sound from any of the speakers:

- Check that receiver/amplifier is on and a source is playing.
- Check that the powered subwoofer is plugged in and its Power switch **1** is switched on to the “•” position.
- Check all wires and connections between receiver/amplifier and speakers. Make sure all wires are connected. Make sure none of the speaker wires are frayed, cut or punctured.
- Review proper operation of your receiver/amplifier.

If there is no sound coming from one speaker:

- Check the “Balance” control on your receiver/amplifier.
- Check all wires and connections between receiver/amplifier and speakers. Make sure all wires are connected. Make sure none of the speaker wires are frayed, cut or punctured.
- In Dolby* Digital or DTS® mode, make sure that the receiver/processor is configured so that the speaker in question is enabled.
- Turn off all electronics and switch the speaker in question with one of the other speakers that is working correctly. Turn everything back on, and determine whether the problem is in the same place: i.e., the speaker that was working previously now has no sound and the speaker that was not working now sounds fine; or whether it has moved: i.e., the speaker that was not working still has no sound and the speaker that was working is still fine. If the problem is in the same place, the source of the problem is most likely with your receiver or amplifier, and you should consult the owner's manual for that product for further information. If the problem has followed the speaker, consult your dealer for further assistance or, if that is not possible, visit our Web site at www.harmankardon.com for further information.

If there is no sound from the center speaker:

- Check all wires and connections between receiver/amplifier and speaker. Make sure all wires are connected. Make sure none of the speaker wires are frayed, cut or punctured.
- If your receiver/processor is set in Dolby Pro Logic* mode, make sure the center speaker is not in phantom mode.
- If your receiver/processor is set in Dolby Digital or DTS mode, make sure the receiver/processor is configured so that the center speaker is enabled.

If the system plays at low volumes but shuts off as volume is increased:

- Check all wires and connections between receiver/amplifier and speakers. Make sure all wires are connected. Make sure none of the speaker wires are frayed, cut or punctured.
- If more than one pair of main speakers is being used, check the minimum impedance requirements of your receiver/amplifier.

If there is low (or no) bass output:

- Make sure the SUB input of the SUB-TS5/6 subwoofer and SUB or LFE output of your receiver or amplifier are properly connected by the RCA-type patch cord.
- Make sure the connections to the Speaker Inputs have the correct polarity (+ and –).
- Make sure the subwoofer is plugged into an active electrical outlet and its Power switch **1** is switched on to the “•” position.
- Check the speaker setup (bass management) settings in your AVR receiver or processor to make certain that the front, center and surround speakers are configured for “Small,” and that the subwoofer is set for “Yes” or “On.”

If there is no sound from the surround speakers:

- Check all wires and connections between receiver/amplifier and speakers. Make sure all wires are connected. Make sure none of the speaker wires are frayed, cut or punctured.
- Review proper operation of your receiver/processor and its surround sound features.
- Make sure the movie or TV show you are watching is recorded in a surround sound mode. If it is not, check to see whether your receiver/processor has other surround modes you may use.
- In Dolby Digital or DTS mode, make sure your receiver/processor is configured so that the surround speakers are enabled.
- Review the operation of your DVD player and the jacket of your DVD to make sure that the DVD features the desired Dolby Digital or DTS mode, and that you have properly selected that mode using both the DVD player's menu and the DVD disc's menu.

SUB-TS5/SUB-TS6 EXPLODED VIEW

HKTS 5/HKTS 6 TEST PROCEDURE

Equipment needed:

- Function/signal generator/sweep generator
- Integrated Amplifier
- Multimeter
- Speaker cables
- Single RCA cable

General Unit Function (UUT = Unit Under Test)

- 1) From the signal generator, connect one line level (RCA) cable to the single SUB input.
- 2) On the front of the unit, turn the LEVEL control full counterclockwise.
- 3) Turn on generator, adjust to **150mV, 50 Hz**.
- 4) Plug in UUT; turn the power switch ON. LED should be Red. Turn LEVEL control full clockwise (MAX)
- 5) LED should now be Green; immediate bass response should be heard and felt from port tube opening.
- 6) Turn off generator, turn VOLUME control fully counterclockwise, disconnect RCA cable.

Sweep Function

- 1) Follow steps 3-6 above, using a sweep generator as a signal source.
- 2) Sweep generator from 20Hz to 300Hz. Listen to the cabinet and drivers for any rattles, clicks, buzzes or any other noises. If any unusual noises are heard, remove woofers and test.

Driver Function

- 1) Remove woofer from cabinet; detach + and - wire clips.
- 2) Check DC resistance of woofer; it should be **3.4 ohms ±10%**
- 3) Connect a pair of speaker cables to driver terminals. Cables should be connected to an integrated amplifier fed by a signal generator. Turn on generator and adjust so that speaker level output is **5.0V**.
- 4) Sweep generator from 20Hz to 1kHz. Listen to driver for any rubbing, buzzing, or other unusual noises.
- 5) Caution: when re-connecting woofer wires, observe proper polarity, as Faston connectors are the same size; red wire should connect to terminal with red dot.

MECHANICAL/SATELLITE PARTS LIST

Part number	Description
SATELLITES	
HKTS 5/SAT-TS5	Complete satellite loudspeaker
HKTS 6/SAT-TS6	Complete satellite loudspeaker
22PF48JA-FW02	Woofer for Sats
g255002	grille
