

LM391 Audio Power Driver

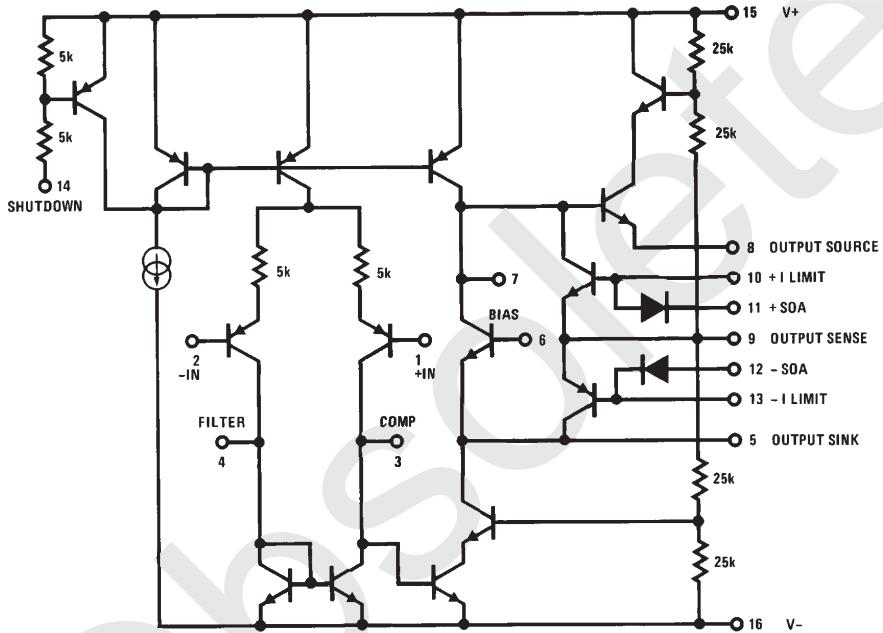

General Description

The LM391 audio power driver is designed to drive external power transistors in 10 to 100 watt power amplifier designs. High power supply voltage operation and true high fidelity performance distinguish this IC. The LM391 is internally protected for output faults and thermal overloads; circuitry providing output transistor protection is user programmable.

Features

- High Supply Voltage $\pm 50\text{V}$ max
- Low Distortion 0.01%
- Low Input Noise 3 μV
- High Supply Rejection 90 dB
- Gain and Bandwidth Selectable
- Dual Slope SOA Protection
- Shutdown Pin
