 *2. C5, 470p omitted.
 *3. R89, 1.5K omitted.

MOTOR REPLACEMENT

TO REPLACE MOTOR CDM-131019 BY M-502E-802
 Motor CDM-131019 that was initially used is no more available. If it is necessary to replace the motor, use M-502E-802. Mount it by use of an adaptor as shown in the photo below and by adding a motor circuit adaptor as shown on the left.

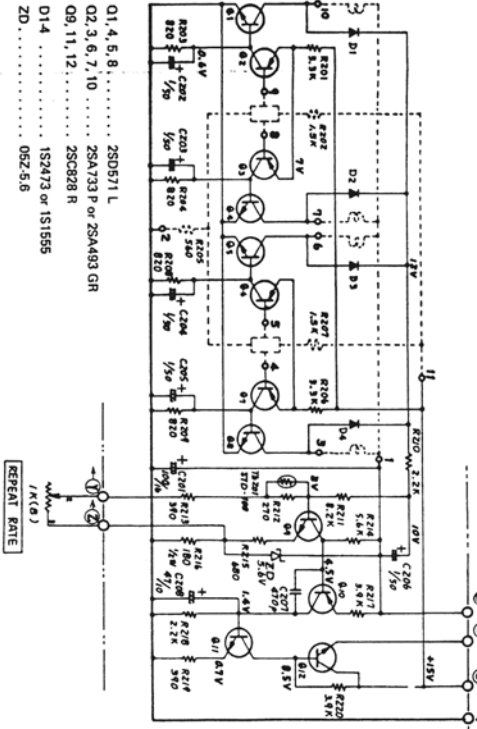

MOTOR CIRCUIT FOR MOTOR CDM-131019 OF INITIAL TYPES

CONNECT FROM POINTS ENCIRCLED TO CORRESPONDING TERMINALS OF MOTOR CIRCUIT ADAPTOR.

MOTOR CIRCUIT ADAPTOR

Mount motor M-502E-802 by use of an adaptor.
 Secure it with four 4p bolts.

TAPE PACK CHASSIS ASSEMBLY

This drawing shows tape pack chassis assembly for SERIAL NO. 573700 AND HIGHER.
For SERIAL NO. UP TO 563699, parts encircled slightly differ.
They can be interchangeable except for (11) and (15) that should be replaced as a set.

ADJUSTMENT AND CHECKING

1. MECHANICAL ADJUSTMENT

1-1. TAPE CHASSIS POSITION

Adjust the tape chassis position so that the clearance from the motor shaft is 1mm. See Fig.1. Secure it by tightening 2 screws at the rear section of the chassis.

1-2. TAPE CHASSIS HEIGHT (TEMPORARY)

Adjust the tape chassis height so that it is 10.5 ± 0.5 mm above the main chassis. See Fig.2. (Make sure that Frame No.8 is not deformed)

1-3. LEAF SPRING PRESSURE

Adjust position of Frame No.10 so that the tension to separate the leaf spring from the bearing roller is 25-30g. See Fig.3.

1-4. POSITION OF FRAMES NOS.7,8, AND 9

Secure the frames as illustrated in Fig.4.

CAUTION: Make adjustment of position of Frames Nos. 7 and 8 accurately with the pinch roller in contact with the motor shaft.

1-5. PINCH ROLLER PRESSURE

Plug in the power cord and turn switch on. Adjust the solenoid position so that the tension to separate the pinch roller from the motor shaft is 1.0-1.4kg, using a spring balance. See Fig.5.

CAUTION: Make sure that pinch roller surface is perfectly parallel with the motor shaft.

1-6. TAPE PACK HEIGHT (FINAL)

- a) Thread the tape and run it.
- b) Consulting Fig.6, visually adjust the head alignment. (This alignment must be made first, otherwise tape cannot run stably.)

- c) For products without cutting on Leaf Spring;
Adjust Frame No.10 so that the tape passes right below the flange edge of the bearing roller.

- d) For products with Spring around Height Adjust Screw:

Make sure that the tape travels with its lower edge 1 ± 0.2 mm above Frame No.8, measured at the pinch roller side.

The Frame No.8 height is adjusted by Height Adjusting Screw "A".

After adjustment of step 1-2, there would be no need of turning the screw so much. If it happens that due to adjustment of this step, the height of tape chassis largely deviates from 10.5mm, there might be another problem to be solved.

2. ELECTRICAL ADJUSTMENT

2-1. TRAP COIL

Adjust Trap Coil (L21) so that bias leakage at Point "A" (R48, 6.8Kohms) is below 2.5Vrms. If the voltage cannot be lowered than the level, replace C37 (470p) with a new one.

2-2. HEAD ALIGNMENT

Before attempting the following electrical adjustment, make sure that mechanical head alignment is perfected.

(a) Run the tape and adjust Record and Playback Heads with alignment screws so that their gaps are completely perpendicular to the edge of the running tape, and that all heads' gap-width dimensions are centered on the tape path.

(b) While monitoring an individual waveform on a scope, adjust alignment screws to obtain maximum output at high frequencies.

The ideal is for all playback heads' output to be equal in levels. Difference in the levels should be minimized by reducing the output of head with higher output. To reduce the output level, center off slightly the playback head's gap from the track.

When doing so, be careful not to cause ill affect on the high frequency response by tilting or azimuth error.

2-3. RECORDING BIAS/CURRENT

Feed sine wave signal, -50dB to input.

(a) Recording Bias

Adjust VR21 for maximum output.

(b) Recording Current

Adjust VR11 for -12dBm output.

2-4. DIRECT OUTPUT CHECKING

Remove the Blank Plug from FROM PA jack. Turn Echo Volume fully counterclockwise. Make sure that direct signal output is $-15\text{dB} \pm 1\text{dBm}$.

2-5. PEAK LEVEL/ LEVEL METER

a) PEAK LEVEL (RE-201 only)
Adjust VR22 so that LED lights dimly at -50dB input signal and goes off completely at -48dB input.

b) LEVEL METER
Adjust VR23 for 0dB reading on Level Meter at -50dB input.

2-6. INSTRUMENT INPUT jack

Feed 1KHz , -24dBm sine wave to INSTRUMENT Input jack. Check to see that the outputs are as shown below.

SELECTOR	OUTPUT
ECHO	-15dBm
NORMAL	-12.5dBm

2-7. INTENSITY

Adjust VR12 so that multiple repetition of noises occurs with Intensity Control as shown.

Other Reference Data

Bias Voltage 50 - 60Vrms across Erase Head.

Tape Speed 12cm - 40cm/sec (approx)

Tone Control: Treble... ± 10 dB at 5KHz

Bass ± 10 dB at 100Hz

PARTS ORDERING INFORMATION

Name of part number of some of the parts is changed from those printed on previously issued parts list. When ordering replacement parts, be sure to follow the description on the present issue.

When ordering parts, be sure to include the following information:

1. Model and Serial Number
2. Part Number
3. A Description of the Part

This parts list includes all standard stock replacement parts. No attempt has been made to include every nut, bolt and screw. If the necessity for a non-listed part arises, please write describing the parts location and function as well as model and serial number of the unit.
